

NOW. THE ADVANTAGES OF TAPE, AT FULL CHANNEL SPEEDS.

OUR NEW 4800 TAPE ACCELERATOR CAN BOOST DATA TRANSFER SPEEDS TO 3 MB/SEC.

Problem: your system's performance is being hindered by the speed of your tape subsystem. Each tape control unit locks up an entire processor/tape channel capable of much higher speeds.

Solution: our new 4800 Tape Accelerator enables two or more tape units to operate concurrently on the same channel: in multi-CPU situations, it also dynamically balances processor workload. Once "channel busy" signals are minimized, your existing tape system's performance can improve two or three fold; in some cases, using fewer channels.

No software or operating modifications are required. The device plugs straight into the Storage Technology 3600 series tape subsystems, and can increase total cable length to over 500 feet.

To find out more, call your local Storage Technology office, clip the coupon, or call (303) 673-4063.
